

## SOCIAL PRESCRIBING SOFTWARE

## Take your social prescribing to the next level

1 in 5 GP appointments are with a patient whose health and wellbeing challenge cannot be addressed by traditional clinical pathways. Joy enables PCNs and ICBs to hit their targets for social prescribing and take their service delivery to the next level.

Deliver compliant best practice Social Prescribing

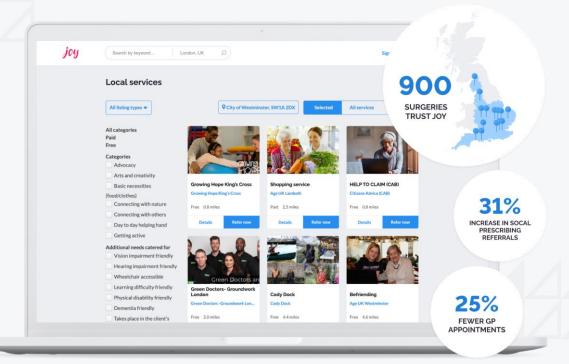

> Services using Joy have seen their ARRS staff efficiency boosted by 20%, supporting services to comply with NHS targets, unlock the full DES funding, and adhere to data standards, such as the Social Prescribing minimum data set.

Free up GP time and boost Social Prescribing

Most surgeries see a 20 to 30% reduction in demand for GP appointments following a Joy social prescription; the number of patients socially prescribed rises by 31%. Self-referral pathways to non-clinical support lift further pressure off GPs.

Deep dive into meaningful Social Prescribing data

Joy demonstrates the ROI from ARRS roles/Social Prescribing, e.g. by automatically calculating the reduction in GP surgery attendance after social prescribing. Joy also pin points gaps in service provision and identifies areas for improvement.
